

PAP

(Pennsylvania Patient Assistance Program)

Provider Bulletin

July 27, 2007

Effective Tuesday, July 31, 2007 PAP will begin enrolling eligible patients into a new program.

In addition to enrolling eligible cardholders in the Lorazepam/Clorazepate program, eligible Pennsylvania residents may enroll in the Pennsylvania Patient Assistance Program (PAP) to receive the following prostate cancer medications: Casodex®, flutamide, Lupron® and Zoladex®.

Cardholders accepted into PAP will receive a paper card (example below) bearing the cardholder's name, copay amounts and a code identifying the medication they are eligible to receive. As with PACE/PACENET cards, no ID number is printed on the card because of HIPAA regulations. Providers may either ask the cardholder or contact Provider Services for this information. The cardholder's beginning date of eligibility for the specific program in which the cardholder is enrolled also appears on the card.

The medication codes are as follows:

0L = lorazepam
0C = clorazepate
1C = Casodex®
1F = flutamide
1L = Lupron®
1Z = Zoladex®
